## **Sonus Streamlines Network-Wide Operations for Multi-Vendor Enterprise Networks**

### **New Software Releases Simplify the Real-Time Communications Network**

WESTFORD, Mass., April 14, 2016 /PRNewswire/ --

#### **Key Takeaways:**

- | Policy Release 10.0 allows enterprises to migrate to Skype for Business with Microsoft Active Directory integration and provides support for multiple PBX dial plans with Centralized Dial Plan Express tools.
- | NetScore Release 5.0 delivers functionality that allows customers to collect and analyze third-party CDRs to provide a finer view of data analytics in disparate communication networks.
- | Policy Release 10.0 and NetScore Release 5.0 are now generally available.

[Sonus Networks](#), Inc. (Nasdaq: SONS), [a global leader in secure and intelligent Cloud communications](#), announced today the general availability of new software releases for its policy routing and analytics products, delivering enhancements to global enterprises that enable seamless interoperability and simplified network management for multi-vendor communication networks.

Cloud communications made smarter

Sonus' Policy portfolio provides centralized policy and network management capabilities in the world's most demanding environments. Policy Release 10.0 heightens Sonus' Policy portfolio with features that simplify the set up and management of Centralized Dial Plan and Session Initiation Protocol (SIP) trunking deployments, offering enterprises a better way to manage their communications. Policy Release 10.0 also enhances the ePSX, Sonus' virtualized PSX embedded within the Sonus SBC 5000 series and SBC 7000, delivering customers with an all-in-one solution that provides the necessary active directory, security and policy management capabilities for a successful Microsoft Skype for Business implementation.

Sonus' NetScore is a software-based analytics solution that captures, aggregates and analyzes Call Detail Records (CDRs) and trunk group utilization data from network elements, then transforms that data into actionable information through visual reports and alerts. With NetScore Release 5.0, customers are able to collect and analyze CDRs from third-party network elements, creating a cost-effective solution for a more granular view of data and analysis in disparate communication networks.

#### **Quotes:**

"Through acquisitions, mergers and technology upgrades organizations' communications networks are constantly changing," said Ram Ramanathan, Sonus director, Product Management. "The latest software updates to Sonus' Policy portfolio provides customers with cost-effective solutions that allow them to get the most out of their current network without having to rip and replace or compromise on performance."
